

Q1 Proposal Rubric

Weight of assessment in final grade: 20%

Type of assessment: individual

Evaluator: Supervisors

Domain	Learning Outcome	Criteria	4-5 Insufficient	6 Sufficient	7-8 Good	9-10 Excellent	Comments
Collaborate	2.a. Collaborate effectively with other group members, other groups and the case owners / experts of the field.	Knowledge on teamwork: - Types of teamwork - Benefits of teamwork -	The student does not know the theories related to teamwork	The student has basic understanding of the collaboration-related theories	The student has detailed knowledge on the collaboration related theories.	The student as detailed knowledge on the collaboration related theories and can apply these in reflecting on their own team.	Grades will be given based on the answers to the specific questions.
	2.b. Explain how intercultural differences play a role in collaboration—this includes social (language, nationality, etc.) but also professional (business vs education, medicine vs engineering) differences and apply this knowledge to the collaboration.	Knowledge on transdisciplinarity - Differences between mono-, multi-, inter- and transdisciplinarity - What are complex problems and complex systems - The relationship between complex problems and transdisciplinarity - What is transdisciplinary learning - What are the transdisciplinary habits of minds	The student does not know the theories related to inter-, transdisciplinary collaborations.	The student has basic understanding of inter-, transdisciplinary collaborations.	The student as detailed knowledge on inter-, transdisciplinary collaborations.	The student as detailed knowledge on inter-, transdisciplinary collaborations and can apply these in reflecting on their own team.	Grades will be given based on the answers to the specific questions.
	2.c. Be aware of and reflect on the various phases of	Knowledge on team conflicts: - Definition of team conflict	The student does not know the	The student has basic	The student as detailed	The student as detailed	Grades will be given based on

	the process, the challenges and problems that were encountered, and what was learned from this.	- Types of team conflicts - Conflict resolution types Application of knowledge: reflection on - own conflict resolution behaviour - Team conflicts experienced through the minor - Conflict resolution methods they used	theories related team conflicts.	understanding of team conflicts.	knowledge on team conflicts	knowledge on team conflicts and can apply these in reflecting on their own experiences within the team and their own behaviour.	the answers to the specific questions.
Research	3.a. Develop a strategy to learn a body of information (current knowledge about a topic from multiple sources, perspectives and methodologies).	Knowledge strategy	The student demonstrates a limited ability to develop a strategy for learning information from multiple sources, perspectives, and methodologies. The strategy is unclear, lacks depth, or does not adequately consider diverse sources and perspectives.	The student partially develops a strategy for learning information, but it may lack clarity or depth in considering multiple sources, perspectives, and methodologies. Some elements of the strategy are effective, while others may be underdeveloped.	The student effectively develops a clear and coherent strategy for learning information from multiple sources, perspectives, and methodologies. The strategy demonstrates an understanding of the importance of diverse sources and perspectives in the learning process.	The student excels in developing an exceptionally well-detailed and comprehensive strategy for learning information. The strategy is highly effective, demonstrating a deep understanding of how to approach multiple sources, perspectives, and methodologies.	
	3.b. Formulate an adequate research question.	Research question	The student demonstrates a limited ability to formulate a research question. The question is unclear, overly broad, or does not effectively address the research topic.	The student partially formulates a research question, but it may lack specificity or depth. The question may need further refinement to effectively address the research topic.	The student effectively formulates a clear and focused research question that is relevant to the research topic. The question demonstrates an	The student excels in formulating an exceptionally well-crafted research question that is highly specific, relevant, and demonstrates a deep understanding of the research	

					understanding of the research area.	area. The question is clear and provides a strong foundation for further investigation.	
	3.c. Develop a helicopter view of a research topic — and understand the information in different contexts, magnitude and connections.	Global understanding	Limited understanding of the research topic, with shallow exploration of contexts, magnitude, and connections. Fails to grasp the overall picture.	Partial understanding of the research topic, with some recognition of contexts, magnitude, and connections. May overlook key aspects.	Effective development of a helicopter view, showcasing a clear grasp of the research topic's various contexts, magnitude, and connections. Offers a well-rounded perspective.	Exceptional development of a helicopter view, demonstrating an in-depth understanding of the research topic, its diverse contexts, significant magnitude, and intricate connections. Provides a holistic perspective.	
	3.e. Create an overview of the different stakeholders that are involved in the research topic.	Stakeholder understanding	Limited understanding of stakeholders involved, with minimal identification and description. Fails to recognize key stakeholders.	Partial understanding of stakeholders, with some identification and basic descriptions. May overlook or provide vague information about certain stakeholders.	Effective development of an overview of research topic stakeholders, showcasing clear identification and well-described roles and interests. Recognizes most key stakeholders.	Exceptional development of an overview, demonstrating a comprehensive understanding of all relevant stakeholders, their roles, and their interests in the research topic. Provides insightful perspectives.	
Reflect	4.b. Ask for constructive feedback of supervisors.	Feedback	FAIL: Student has poorly prepared on	PASS: Student has prepared on which subjects the student wants feedback on and formulates what specific feedback is wanted.			

			what subject feedback is wanted.	
	4.c. Understand how personal biases influence work.	Personal biases	FAIL: Student shows no or poor understanding of personal biases in relation to the work in the minor.	PASS: Student can formulate and is aware of personal biases and how that (might) influence their personal and team work in the minor.
