

Q2 Paper

Weight of assessment in final grade: 30%

Type of assessment: group

Evaluator: Supervisors

	Learning Outcome (numbers based on overall outcomes)	Criteria	4-5 Insufficient	6 Sufficient	7-8 Good	9-10 Excellent	Grade	Comments
Communicate	1.f Write an effective scientific report to communicate their research (relevance, methods, findings)	Abstract	The abstract is not clear, even after reading the rest of the proposal or the abstract misses one or more key elements of the paper	The abstract contains all key elements and can be understood without reading the rest of the paper, but this requires some effort, or some key aspects are unclear	The abstract can be easily understood without reading the rest of the paper and clearly summarizes all key points	The abstract is a convincing and easy to read summary of the paper, properly highlighting all its key elements		
		Paper structure: key sections and use of paragraphs	Introduction, main question/aim, method, results, and discussion/conclusion are not present or unclear Paragraphs appear disconnected, and/or subheadings are missing or unclear	Introduction, main question/aim, method, results, and discussion/conclusion are present but occasionally lack expected information Paper is clearly structured overall, but some paragraphs appear disconnected or do not have clear topic sentences, and some subheadings	Introduction, main question/aim, method, results, and discussion/conclusion are present and contain expected information. Paragraphs are generally well-connected and have topic sentences, subheadings are informative. Some minor aspects could still be improved.	The whole paper is optimally structured. Sections well-crafted and highlight key information. Effective paragraph use that supports the storyline. Could be submitted as a manuscript to the selected journal.		

				are not informative.				
		Storyline and argumentation	Connection between aim and conclusion is unclear. Claims are unsupported. References may be lacking and/or paraphrases are too close to the original.	Aim and conclusion are related, but it is not always clear how (elements from) the storyline contributes to the aim or conclusions. Occasionally, information is not well supported by references. Some paraphrases may be too close to the original.	Conclusions correspond well to the paper's aim. Claims are well supported by references. Critical comparison of sources may be lacking.	Well-crafted storyline, moving from the aim to conclusion. Innovative aspects or valuable contributions of the research are highlighted. Claims are well supported, and (methodological) choices are well argued for. References are critically discussed where needed.		
		Language and style	Difficult to follow because of language/grammatical errors and poor style (language lacks conciseness and clarity).	Grammar and spelling are sufficient; a few errors may occur. Content is comprehensible but readability issues may occur.	Overall correct grammar and spelling. Clear and precise academic style, concise and easily readable.	Flawless grammar and spelling, no editing required. Convincing, clear, and attractive language and style, easy to read.		
		Figures, tables and format	Use of figures/tables is incorrect or unclear. Format/lay-out may hinder	Minor aspects of figures and tables can be improved Format / lay-out is	Use of figures and tables is correct and clear; they are properly referred to	Figures and tables are self-explanatory and well-integrated into the text. They		

			readability; reference list contains too many errors.	clear and according to the selected author's guidelines, reference list may contain minor errors.	in the text. Format / lay-out is consistent and according to the selected author's guidelines, reference list is flawless.	support the paper's storyline.		
Collaborate	2.c Make a theory-based standpoint in the ethical dilemmas around credit, ownership and group work.	Contributions to publication	Unable to describe contributions to work in a clear way.	Some description of contributions but not clear and comprehensive.	Mostly clear descriptions of contributions	Clear and articulate descriptions of contributions and ownership		
Research	3.a. Develop research plan and gather the right tools and knowledge to complete their project	Research plan formulation	The method section is unclearly formulated, overly broad, or not effectively addressing the research topic.	The method section may require further refinement to effectively address the research topic.	The method section is relevant to the research question and demonstrates an understanding of the research area.	The method section is written highly specific, are relevant to address the question and shows a deep understanding of the research area.		
	3.b. Critically evaluate research strategies, and if necessary, modify and adapt these strategies	Critical thinking on strategies, adaptability	Discussion of the paper struggles with identifying problems, or struggles with finding solutions	Discussion of the paper identifies scientific challenges to some extent, but limited solutions suggested, or missed some problems.	Discussion of the paper demonstrates a understanding of problem and offers workable solutions.	Discussion of the paper identifies scientific challenges and solutions and provides insight on next steps.		
	3.c Plan and (if possible) conduct an experiment	Implementation	No results are described or what is described does not align with the paper.	Basic summary of experiments is given but lacks depth.	Results are clearly written and experiments contribute to the	An exceptionally insightful and comprehensive results section		

	based on research.				hypothesis.	describing the outcome in a clear and concise manner		
	3.d Analyse outcome of an experiment	Data analysis	Fails to include essential data and virtually no data analysis.	Report includes the required sections but with limited detail, several mistakes or is unclear.	A clear and well-structured data analysis. Graphs and other visualizations contain no errors	Provides an exceptionally well-crafted data analysis including insights and description of limits.		
	3.e. Apply research ethics around reproducibility, data management and integrity	Ethics	Limited description of these sections or unclear about importance.	Partial description of data management and reproducibility. Lacks completeness.	Effective description of supports for reproducibility, and data management.	Exceptional description of elements of reproducibility and data management and demonstrating strong research integrity		
	3f. Understands process of institutional reviews and scientific publications	Publishing	Cover letter and rebuttal to peer feedback are unclear		Cover letter is clear and concise, rebuttal is thorough and thoughtful.		PASS/ FAIL	
Reflect	4.b. Ask for constructive feedback peers	Feedback	Suggestions are not responded to. Or student failed to provide their report in a timely fashion to receive feedback.	Has made limited use of feedback and is overly defensive	Student has used feedback in a thoughtful way and followed suggestions	Student has clearly thought on feedback to generate new insights for improvement. And has well-reasoned discussion of why they've made the choices they've made.
