

Q1 Oral Exam Rubric

Weight of assessment in final grade: 20%

Type of assessment: individual

Evaluator: Supervisors

Domain	Learning Outcome	Criteria	4-5 Insufficient	6 Sufficient	7-8 Good	9-10 Excellent	Comments
Collaborate	2.a. Collaborate effectively with other group members, other groups and the case owners / experts of the field.	Can describe collaborative decision making and processes used	The student can't describe reasonable actions they've taken to be collaborative	The student has basic understanding of what actions are required for collaboration	The student can describe their effective practices.	The student describes how they helped others be more collaborative or came up with solutions based on using collaboration.	
	2.c. Explain how intercultural differences play a role in collaboration—this includes social (language, nationality, etc.) but also professional (business vs education, medicine vs engineering) differences and apply this knowledge to the collaboration.	Identify various kinds of differences and how they affect collaboration and steps to use those differences effectively.	The student is unable to identify cultural differences or discuss strengths and weaknesses of their own background.	The student has basic understanding but limited.	The student has detailed understanding of differences	The student has nuanced understanding and is able to build rapport based on that understanding..	
	2.d. Be aware of and reflect on the various	Application of knowledge: reflection on	The student does not know any strategies for	The student has basic understanding of	The student as detailed knowledge	The student as detailed knowledge	

	phases of the process, the challenges and problems that were encountered, and what was learned from this.	- own conflict resolution behaviour - Team conflicts experienced through the minor - Conflict resolution methods they used	resolving team conflicts.	team conflicts with limited strategies	on team conflicts and multiple means of addressing them.	on team conflicts and can use them to help the team grow.	
Research	3.a. Able to identify, analyse and integrate current knowledge about a topic from multiple sources, perspectives and methodologies, and identify knowledge gaps.	Knowledge strategy	The student identifies knowledge from a narrow range of sources. Little to no integration or critical analysis. Perspectives are one-sided or assumed. Knowledge gaps are unclear or not addressed.	The student identifies information from basic or limited sources, with superficial integration. Demonstrates minimal comparison of perspectives. Knowledge gaps are mentioned but not clearly articulated.	The student integrates information from multiple, appropriate sources with critical insight. Clearly identifies relevant knowledge gaps and limitations in current understanding.	The student demonstrates an outstanding ability to identify, critically analyse, and integrate knowledge from a wide range of high-quality, relevant sources. Clearly and insightfully identifies significant knowledge gaps and proposes directions for further inquiry.	
	3.b. Formulate an adequate research question and relevant research strategy to address it.	Research question	The student demonstrates a limited ability to formulate a research question. The question is unclear, overly broad, or does not effectively address the research topic.	The student partially formulates a research question, but it may lack specificity or depth.	The student effectively formulates a clear and focused research question that is relevant to the research topic.	The student excels in collaboratively formulating a highly specific, relevant, research question that provides a strong foundation for further investigation. The research strategy well-aligned, feasible, and	

						methodologically sound, clear understanding of key steps, tools, and ethical considerations.	
	3.c. Develop a helicopter view of a research topic — and understand the information in different contexts, magnitude and connections.	Global understanding	Limited understanding of the research topic, with shallow exploration of contexts, magnitude, and connections. Fails to grasp the overall picture.	Partial understanding of the research topic, with some recognition of contexts, magnitude, and connections. May overlook key aspects.	Effective helicopter view, demonstrating clear understanding of the topic's contexts, scale, and connections, providing a balanced perspective.	Exceptional helicopter view, showing deep understanding of the topic, its contexts, significance, and connections, with a clear holistic perspective.	
	3.e. Create an overview of the different stakeholders that are involved in the research topic.	Stakeholder understanding	Limited understanding of stakeholders involved, with minimal identification and description. Fails to recognize key stakeholders.	Partial understanding of stakeholders, with some identification and basic descriptions. May overlook or provide vague information about certain stakeholders.	Effective overview of research topic stakeholders, showcasing clear identification and well-described roles and interests. Recognizes most key stakeholders.	Exceptional overview demonstrating comprehensive understanding of all relevant stakeholders, their roles, and interests with insightful perspectives.	
	3.f. Understand research grant application processes.	Research application process	Poor understanding. Unclear on structure, purpose, and process of grant applications.	Basic understanding of application parts. Limited awareness of funder expectations or strategic elements.	Good understanding of main components. Aware of funder fit and structure. Some gaps in detail or strategy.	Excellent grasp of full grant process. Understands funder expectations, structure, and strategy. Can apply this knowledge effectively.	

Reflect	4.b. Understand how personal biases influence work.	Personal biases	FAIL: Student shows no or poor understanding of personal biases in relation to the work in the minor.	PASS: Student can formulate and is aware of personal biases and how that (might) influence their personal and team work in the minor.
	4.c. Ask for constructive feedback from supervisors.	Feedback	FAIL: Student has not asked for feedback these past ten weeks and has not acted on the feedback given.	PASS: Student has asked for feedback these past ten weeks and has acted effectively on the feedback given.
