

Q2 Paper

Weight of assessment in final grade: 30%

Type of assessment: group

Evaluator: Supervisors

	Learning Outcome (numbers based on overall outcomes)	Criteria	4-5 Insufficient	6 Sufficient	7-8 Good	9-10 Excellent	Comments
Communicate	1.b Write an effective scientific report to communicate their research (relevance, methods, findings)	Abstract	The abstract is not clear or the abstract misses one or more key elements of the paper.	The abstract contains all key elements and can generally be understood, but some key aspects are unclear.	The abstract can be easily understood and clearly summarizes all key points.	The abstract is a convincing and easy to read summary of the paper.	
		Structure and storyline	Key sections and elements are not present or unclear.(Introduction, main question/aim, method, results, and discussion/conclusion) , or:Conclusion does not correspond to paper aim, or: Paragraphs appear disconnected.	Key elements and sections are present but occasionally lack expected information, or: (Elements of) the storyline are not aligned with aim or conclusion, or: Some paragraphs appear disconnected s,	Key elements and sections are present and contain the expected information Conclusions correspond well to the paper's aim. generally well-connected, subheadings are informative.	The paper is optimally structured; Well-crafted storyline with effective paragraphs, moving from the aim to conclusion. Innovative aspects or valuable contributions of the research are highlighted.	
		Argumentation and reference use	Claims are unsupported. References may be lacking and/or paraphrases are too	Occasionally, information is not well supported by references or well	Claims are well supported by	Claims are well supported, and (methodological) choices are well argued	

			close to the original.	paraphrased.	references. Critical comparison of sources may be lacking.	for. References are critically discussed where needed.	
		Language and style	Difficult to follow because of language/grammatical errors and poor style (language lacks conciseness and clarity).	Content is comprehensible but readability issues may occur. Grammar and spelling are sufficient; a few errors may occur.	Clear and precise academic style, concise and easily readable. Overall correct grammar and spelling.	Convincing, clear, and attractive language and style, easy to read. No editing for grammar and spelling, required.	
		Figures, tables and format	Use of figures/tables is incorrect or unclear. Format/lay-out may hinder readability; reference list contains many errors.	Minor aspects of figures and tables can be improved Format / lay-out is clear and according to the selected journal's guidelines, reference list may contain minor errors.	Use of figures and tables is correct and clear; they are properly referred to in the text. Format / lay-out is consistent and according to the selected journal's guidelines, reference list is flawless.	Figures and tables are self-explanatory and well-integrated into the text. They support the paper's storyline.	
	1.d. Provide critical and constructive feedback on scientific reports.	Feedback	Feedback is vague, minimal, or overly critical. Misses key issues or lacks useful suggestions.	Feedback is basic or general. Covers some relevant points but lacks clarity, detail, or constructiveness.	Gives relevant and generally clear feedback. Points out strengths and issues, but with less depth or consistency.	Gives precise, well-argued, and constructive feedback. Identifies key strengths and weaknesses with clear suggestions.	
Collaborate	2.b. Process management: plan, schedule and execute the research project.	Process management	The group provides no clear plan or timeline, executes poorly, and shows minimal initiative.	The group provides a basic plan and timeline, and shows moderate responsibility.	The group provides a clear, realistic plan, , and manages time well.	The group excels in planning and execution, and demonstrates strong autonomy.	
Research	3.a. Develop research plan and gather the right tools and knowledge to complete their	Research plan formulation	The method section is unclearly formulated , overly broad, or not effectively addressing the research	The method section may require further refinement to effectively address the research topic.	The method section is relevant to the research question and demonstrates an understanding of the	The method section, is relevant to address the question and shows a deep understanding of	

	project		topic.		research area.	the research area.	
	3.b. Critically evaluate research strategies, and if necessary, modify and adapt these strategies	Critical thinking on strategies, adaptability	Discussion of the paper struggles with identifying problems, or struggles with finding solutions	Discussion of the paper touches upon scientific challenges but only to some extent, and/or important points are missed.	Discussion of the paper demonstrates a good understanding of problem .	Discussion of the paper identifies key scientific challenges and provides insightful on next steps where possible.	
	3.c Plan and (if possible) conduct an experiment based on research.	Implementation	No results are described or what is described does not align with the paper.	Basic summary of experiments is given but lacks depth.	Results are clearly written and experiments contribute to the hypothesis.	An exceptionally insightful and comprehensive results section describing the outcome in a clear and concise manner	
	3.d Analyse outcome of an experiment	Data analysis	Fails to include essential data and virtually no data analysis.	Report includes the required sections but with limited detail, several mistakes or is unclear.	A clear and well-structured data analysis. Graphs and other visualizations contain no errors.	Provides an exceptionally well-crafted data analysis including insights and description of limits. Shares the exact right amount of data to support the discussion.	
	3.e. Apply research ethics around reproducibility, data management and integrity	Ethics	Limited description of these sections or unclear about importance.	Partial description of data management and reproducibility. Lacks completeness.	Effective description of supports for reproducibility, and data management.	Exceptional description of elements of reproducibility and data management and demonstrating strong research integrity	
	3f. Understand processes involved with institutional reviews, grant applications and scientific publications.	Publishing	Cover letter and rebuttal to peer feedback are unclear		Cover letter is clear and concise; rebuttal is thorough and thoughtful.		
Reflect	4.b. Ask for constructive feedback from	Feedback	Suggestions are not responded to. Or students failed to provide their report	Students made limited use of feedback and are overly defensive	Students have used feedback in a thoughtful way and followed	Students have clearly thought on feedback to generate new insights	

	peers.		in a timely fashion to receive feedback.		suggestions	for improvement. They have well-reasoned discussion of why they've made the choices they've made.
