

Q1 Oral Exam

Weight of assessment in final grade: 20%

Type of assessment: individual

Evaluator: Supervisors

Domain	Learning Outcome	Criteria	4-5 Insufficient	6 Sufficient	7-8 Good	9-10 Excellent	Grade	Comments
Collaborate	2.a. Develop partnerships with other groups, stakeholders and scientists.	Knowledge on teamwork: - Roles of partnerships - Benefits of partnerships -	The student does not know the theories related to collaborative science	The student has basic understanding of the collaboration-related theories	The student has detailed knowledge on the collaboration-related theories.	The student has detailed knowledge on the collaboration related theories and can apply these in collaborative interactions.		
	2.b. Reflect on transdisciplinary collaboration in such a way that it can improve collaboration.	Knowledge on transdisciplinarity - Differences between mono-, multi-, inter- and transdisciplinarity - What are complex problems and complex systems - The relationship between complex problems and transdisciplinarity - What is transdisciplinary learning - What are the	The student does not know the theories related to inter-, transdisciplinary collaborations.	The student has basic understanding of inter-, transdisciplinary collaborations.	The student as detailed knowledge on inter-, transdisciplinary collaborations. has applied their knowledge to improve collaborations.	The student as detailed knowledge on inter-, transdisciplinary collaborations and can help others develop their transdisciplinary skills		

		transdisciplinary habits of minds						
	2.c. Make a theory-based standpoint in the ethical dilemmas around credit, ownership and group work.	- Credit and ownership	The student does not know the theories related to credit, ownership and group work	The student has basic understanding of credit, ownership and group work	The student as detailed knowledge of credit, ownership and group work	The student as detailed knowledge of credit, ownership and group work and can apply these in reflecting on their own experiences within the team and their own behaviour.		
	3.a Develop research plan and gather the right sources and knowledge to complete their project.	Research strategy	The student demonstrates a limited ability to develop a strategy for developing a research project. The strategy is unclear, lacks depth, or does not adequately consider diverse sources and perspectives.	The student partially develops an effective strategy for developing a research project but it may lack clarity or depth in considering multiple sources, perspectives, and methodologies.	The student effectively develops a clear and coherent strategy for a research project and methodologies. The strategy demonstrates an understanding of the importance of diverse sources and perspectives in the research process.	The student excels in developing an exceptionally well-detailed and comprehensive strategy for doing a research project The strategy is highly effective, demonstrating a deep understanding of how to approach their project using multiple sources, perspectives, and methodologies.		
Research	3.b. Critically evaluate research strategies,	Research strategy	The student demonstrates a limited ability to critically	The student partially thinks critically about their methodology	The student effectively updates their strategy and	The student excels in improving and adapting their project and thinking critically		

	and if necessary, modify and adapt these strategies.		evaluate their plan and adapt it as needed	but may resist changes or not see large problems.	shows critical thinking and flexibility in adapting to challenges and opportunities.	about strategies.		
	3.c. Plan and (if possible) conduct an experiment based on their research	Research Planning	Limited understanding of the research requirements and how to implement their experiment.	Partial understanding of experimental requirements, with some recognition of contexts, magnitude, connections, time planning and collaboration. May overlook key aspects.	Effective development of an experiment plan, showcasing a clear grasp of the research steps necessary.	Exceptional development of realistic experiment plan even if unable to complete the research.		
	3.d. Analyse outcomes of an experiment in a critical way	data analysis understanding	Limited understanding of data analysis Poor data analysis skills and lack of data management	Partial understanding of data analysis and management	Effective development of data analysis and management plan. Made good decisions but cannot explain why	Exceptional development of a data analysis and management plan, is able to describe why they made the decisions they did.		
	3.e Apply research ethics around reproducibility, data management	Ethics in research	Struggles with identifying problems. Did not show understanding of ethics in		Understands problems, is able to discuss understanding of ethics in reproducibility,	Understands problems, is able to discuss understanding of ethics in reproducibility, data		

	and integrity.		reproducibility, data management and integrity.		data management and integrity.	management and integrity providing interesting insight.		
	3.f Understand processes involved with institutional reviews, grant applications and scientific publication	Research review processes	Does not demonstrate understanding of scientific review processes			Understands processes of scientific review including research integrity, grants and publications		
	3.g Apply ethical and philosophical considerations in performing research.	Philosophy and ethics	Does not demonstrate understanding of ethical and philosophical considerations in research.			Identifies problems, has long-term vision, and reflects on ethical and philosophical context of research.		
Reflect	4.b. Ask for constructive feedback of peers.	Feedback	FAIL: Student has poorly prepared on what subject feedback is wanted.			PASS: Student has prepared which subjects the student wants feedback on and formulates what specific feedback is wanted, and can describe how they used that feedback.		
	4.c. Understand how personal biases influence work.	Personal biases	FAIL: Student shows no or poor understanding of biases in relation to collaboration and science.			PASS: Student can formulate and is aware of biases and how that (might) influence collaboration and science.
